

Beginner-Level Programming Questions in JS

1. Create two variables a and b with values 5 and 3. Print their sum.
2. Assign the value 50 to p and 30 to q. Print their difference.
3. Create two variables with numbers and print their product.
4. Declare a variable num with value 7 and print its square.
5. Find the average of the following set of numbers. 65, 85, 70, 90, and 105.
6. Store the length and width of a rectangle in variables and print its area.
7. Store the radius of a circle and print its circumference (use $2 \times 3.14 \times \text{radius}$).
8. Store your height in meters and weight in kg, then print your BMI(Body Mass Index) ($\text{weight} / (\text{height} \times \text{height})$).

Area-Related Questions

1. **Area of Rectangle**

Store the length and width in variables and calculate area using
 $\text{area} = \text{length} \times \text{width}$

2. **Area of Square**

Store the side length in a variable and calculate area using
 $\text{area} = \text{side} \times \text{side}$

3. **Area of Triangle**

Store base and height in variables and calculate area using
 $\text{area} = 0.5 \times \text{base} \times \text{height}$

4. **Area of Circle**

Store the radius in a variable and calculate area using
 $\text{area} = 3.14 \times \text{radius} \times \text{radius}$

5. Perimeter of Rectangle

Store length and width, then calculate using
 $\text{perimeter} = 2 \times (\text{length} + \text{width})$

6. Circumference of Circle

Store radius and calculate using
 $\text{circumference} = 2 \times 3.14 \times \text{radius}$

7. Surface Area of Cube

Store side length and calculate using
 $\text{surface_area} = 6 \times \text{side} \times \text{side}$

8. Surface Area of Sphere

Store radius and calculate using
 $\text{surface_area} = 4 \times 3.14 \times \text{radius} \times \text{radius}$

9. Perimeter of Square

$\text{perimeter} = 4 \times \text{side}$

10. Perimeter of Triangle

$\text{perimeter} = \text{side1} + \text{side2} + \text{side3}$
